Firmware Update Manual

USBBootloader.exe is the tool software to update firmware into the USB Series Device Board developed by Decision Computer. When you get a new version of firmware (.hex), you can follow the steps to update firmware to the board.

1. Remove the external input signal Voltage and only support device power.

2. Set Board Id 15 (All up) for Update Mode and press the Reset button.

3. Connect PC to the Board by USB

4. When Id is 15, computer will treat the board as a different device, it needs to install driver. If this is the first to use this function, please indicate the driver install path to the Driver Folder to install the driver.

5. Open the Software USBBootloader.exe and press the Open button and indicate the hex file and then press the Download button to update firmware.

6. Set Board Id between 0 ~ 14 and press Reset button and connect PC again.
